

**Ex.no:8**

**Date:22/4/25**

**8. Consider a Library Management System. Develop a JavaScript program that will validate the controls in the forms you have created for the application. State the assumptions you make (business logic you are taking into consideration). Note: Your application must access a database using Servlet/JSP.**

**Aim:**

To develop a JavaScript-based client-side validation system for a Library Management System that ensures all user inputs in forms (such as registration, book entry, and issue/return transactions) are valid before submission. The application will integrate with a backend implemented using Servlet/JSP to perform server-side operations and database access, ensuring data consistency and integrity across the system.

**Program:**

**Display\_book.jsp:**

```
<%@ page import="java.sql.*"%>
<%@ page contentType="text/html; charset=UTF-8" language="java"%>
<html>
<head>
<title>Library Books List</title>
<style>
table {
    border-collapse: collapse;
    width: 90%;
    margin: 20px auto;
}

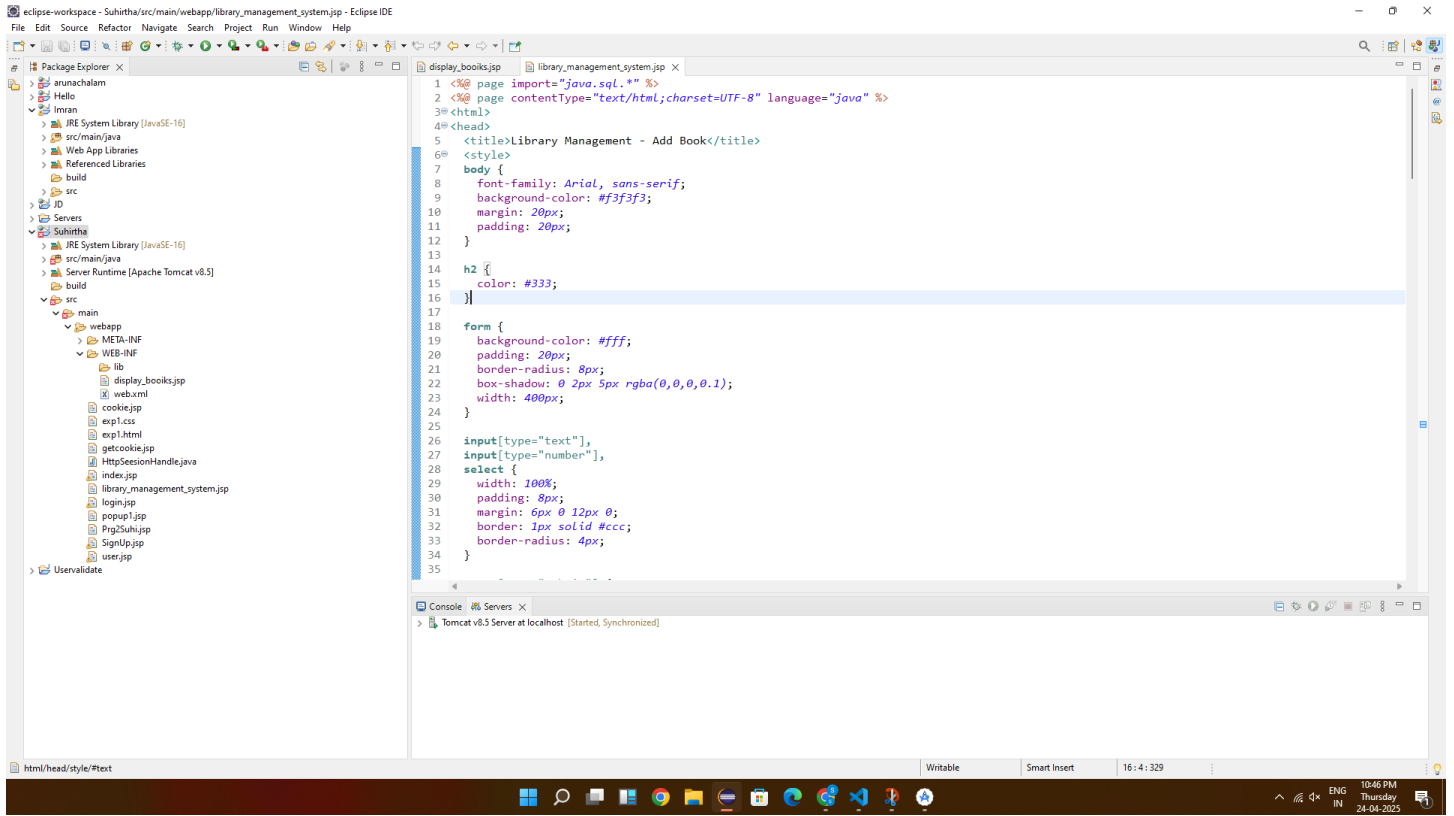

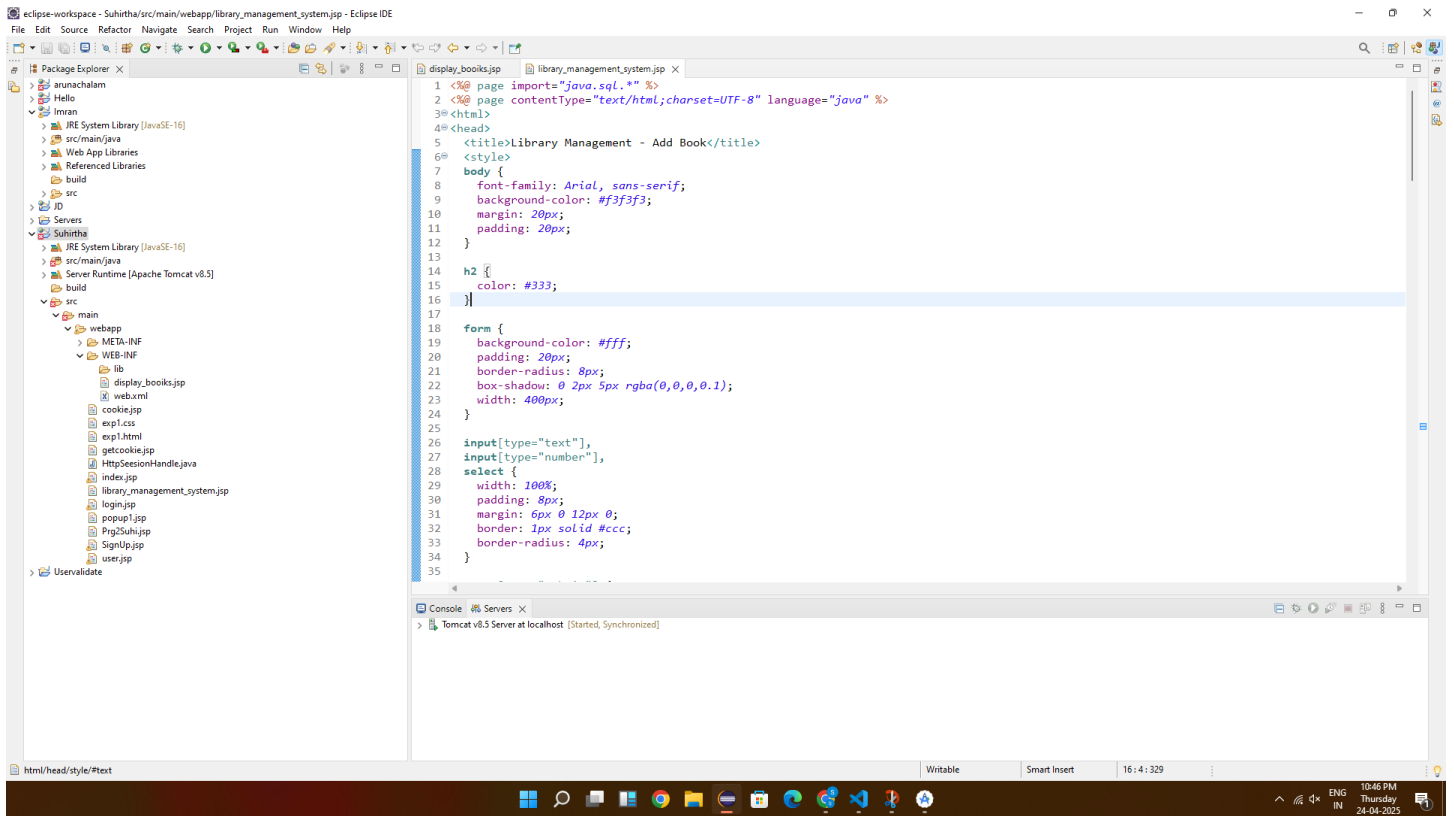

th, td {
    border: 1px solid #333;
    padding: 10px;
    text-align: center;
}
th {
    background-color: #f2f2f2;
}
h2 {
    text-align: center;
}
</style>
</head>
<body>
    <h2>All Books in Library</h2>
    <%
        try {
```

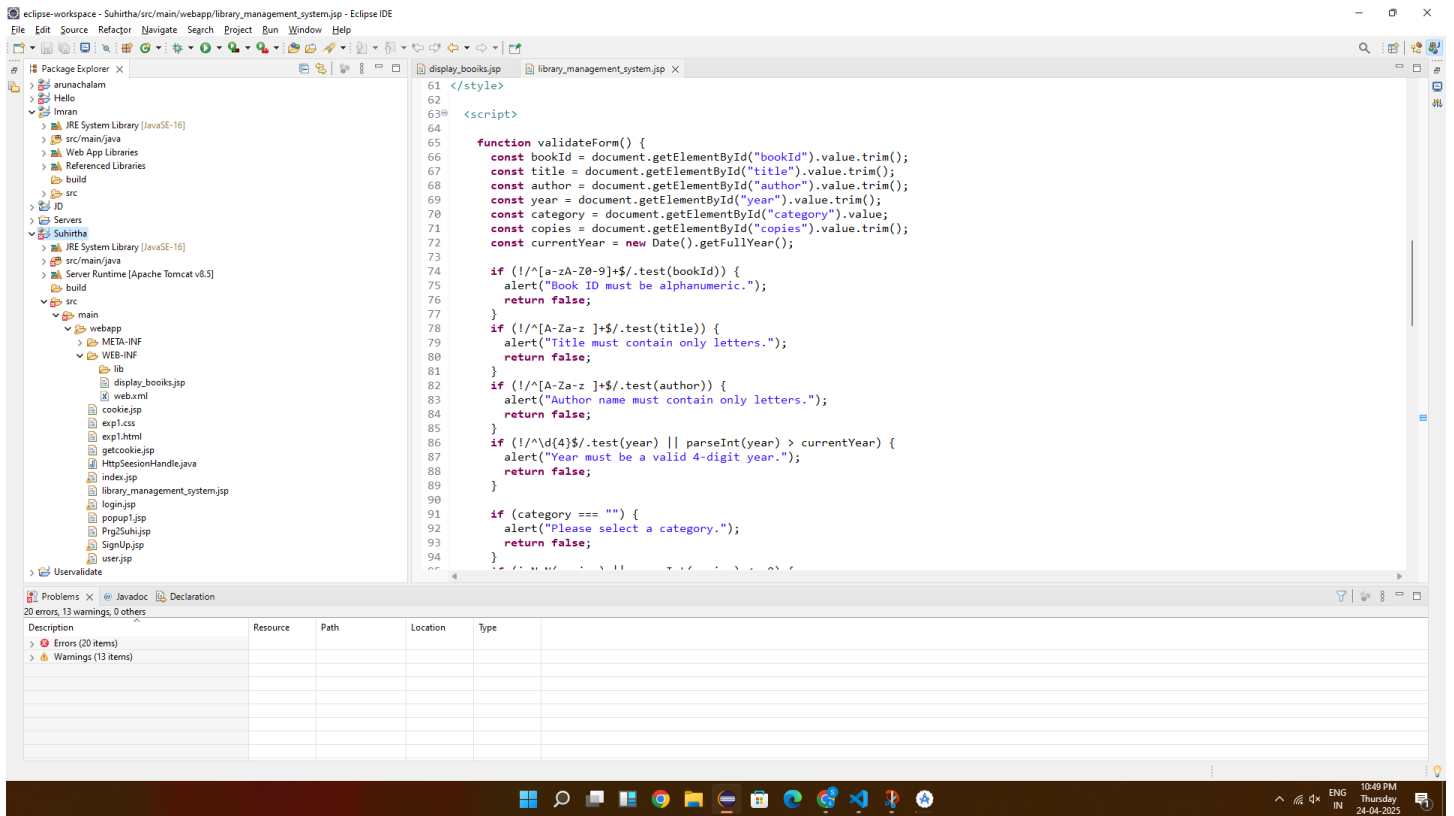

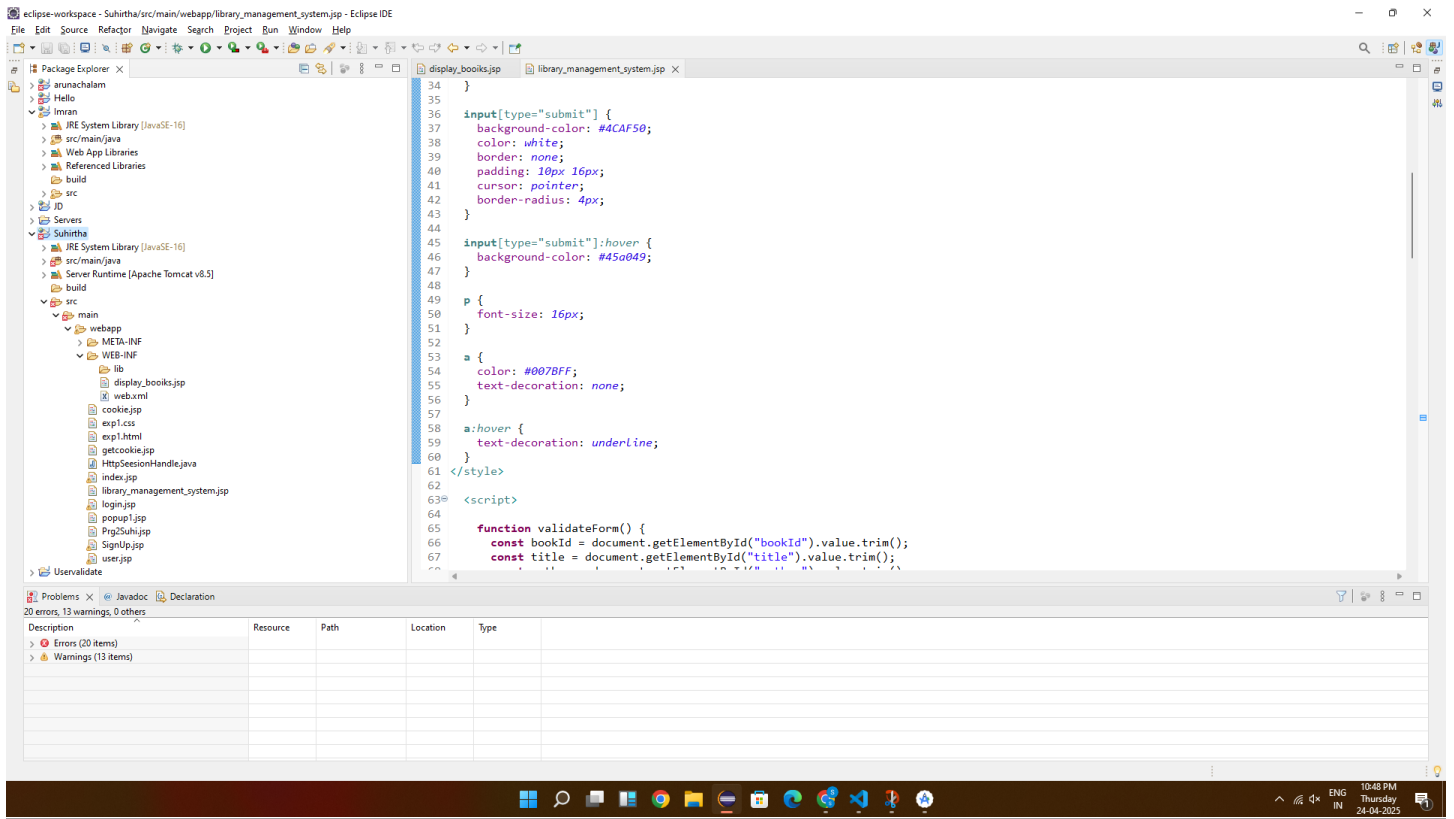

Roll.no:231801173

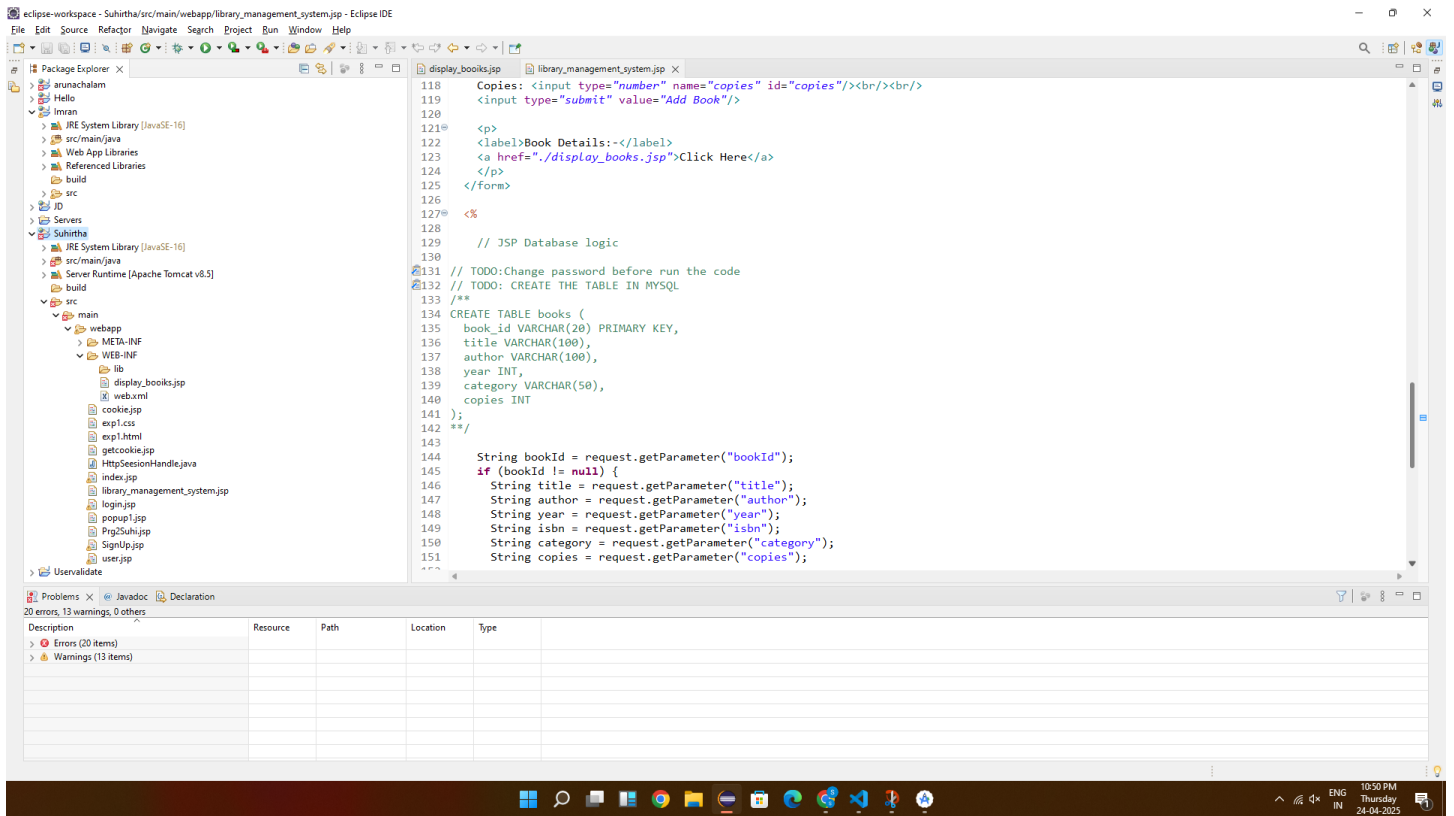

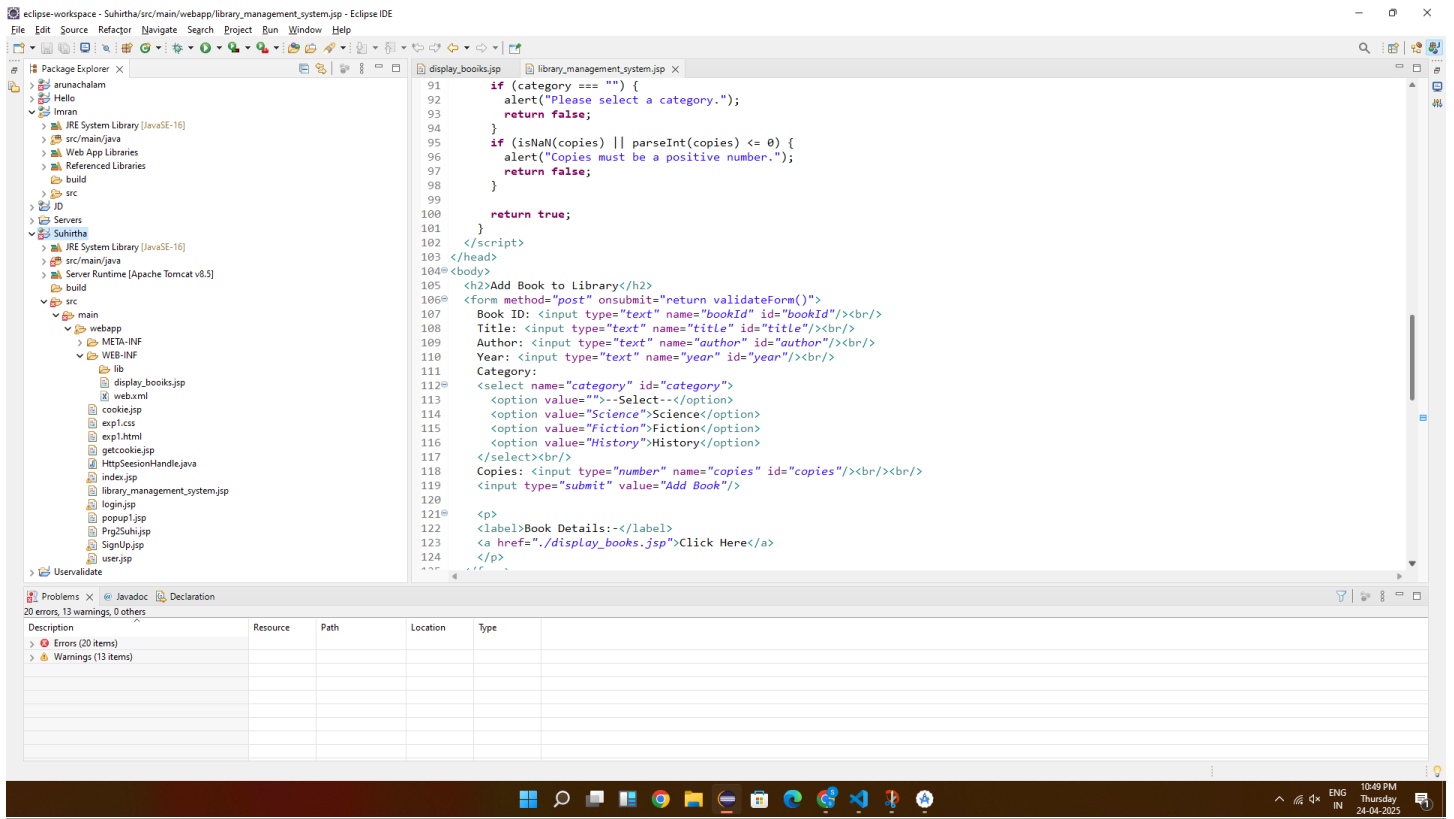

```

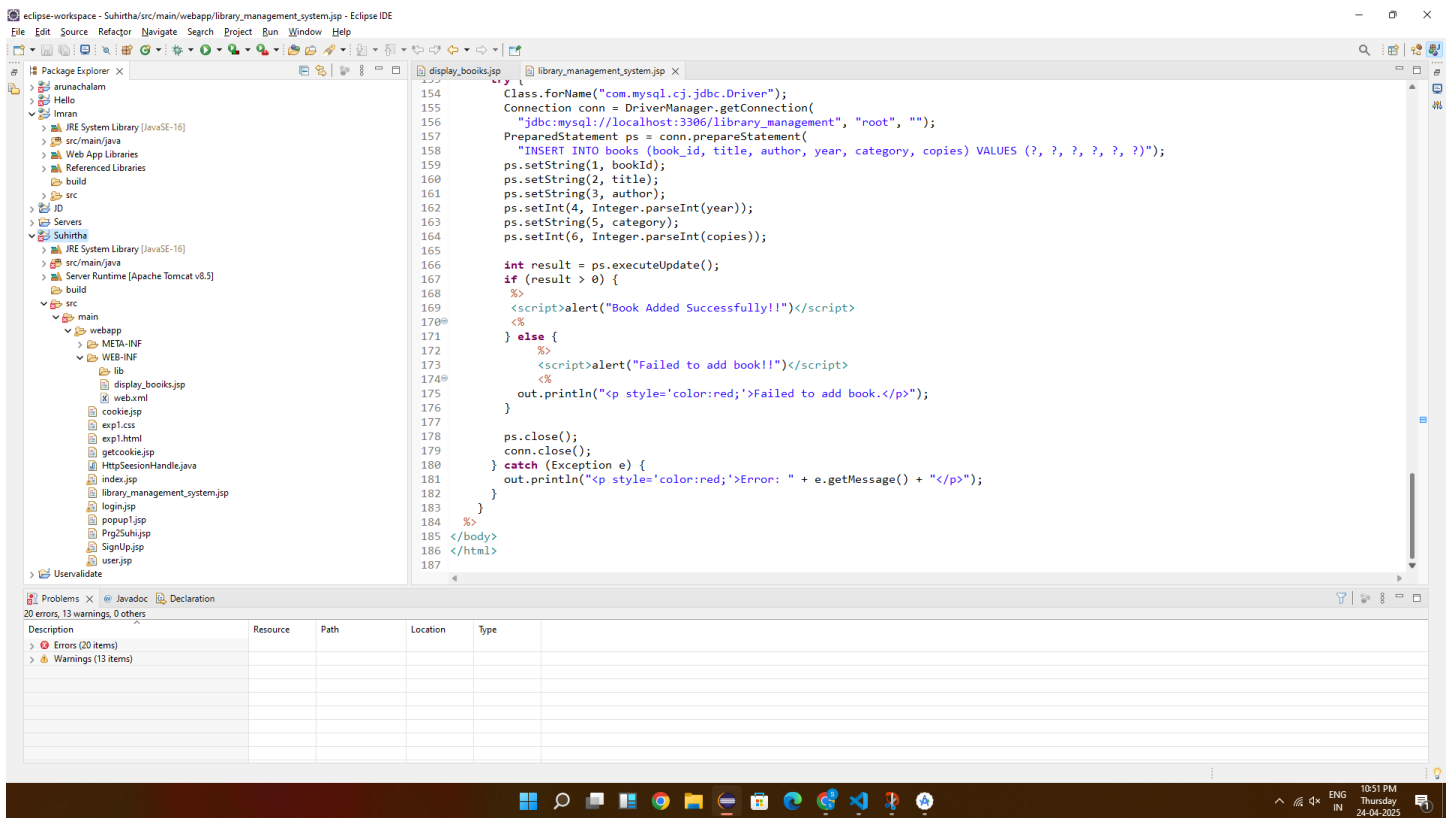

Class.forName("com.mysql.cj.jdbc.Driver");
Connection conn = DriverManager.getConnection(
    "jdbc:mysql://localhost:3306/library_management_muthulakshmi",
    "root", "");
Statement stmt = conn.createStatement();
ResultSet rs = stmt.executeQuery("SELECT * FROM books");
out.println("<table>");
out.println("<tr><th>Book ID</th><th>Title</th><th>Author</th><th>Year</th><th>Category</th><th>Copies</th></tr>");
    while (rs.next()) {
        out.println("<tr>");
        out.println("<td>" + rs.getString("book_id") + "</td>");
        out.println("<td>" + rs.getString("title") + "</td>");
        out.println("<td>" + rs.getString("author") + "</td>");
        out.println("<td>" + rs.getInt("year") + "</td>");
        out.println("<td>" + rs.getString("category") + "</td>");
        out.println("<td>" + rs.getInt("copies") + "</td>");
        out.println("</tr>");
    }
    out.println("</table>");
    rs.close();
    stmt.close();
    conn.close();
} catch (Exception e) {
    out.println("<p style='color:red;text-align:center;'>Error: " +
e.getMessage() + "</p>");
}
%>
</body>
</html>

```

## Output:

The screenshot shows a web browser window with the address bar displaying `localhost:7750/Dynamic_web_project_muthulakshmi/library_management_system.jsp`. The browser's tab bar includes several open tabs: "Sent Mail - 231", "AIDS-B-MA234", "Get Cookie", "New Tab", "localhost:7750/", "google.com/se", and "Consider a Libr".

The main content area of the browser displays a form titled "Add Book to Library". The form is contained within a white box with a light gray border and a subtle drop shadow. It includes the following fields and elements:

- Book ID:** A text input field.
- Title:** A text input field.
- Author:** A text input field.
- Year:** A text input field.
- Category:** A dropdown menu with the placeholder text "--Select--" and a downward arrow icon.
- Copies:** A text input field.
- Add Book:** A green button with white text.
- Book Details:-** A label followed by a blue hyperlink labeled "Click Here".

Book ID	Title	Author	Year	Category	Copies
---------	-------	--------	------	----------	--------

**Result:**

A JavaScript program was developed to validate the Library Management System forms before submission. The validations prevent incorrect or incomplete data from being sent to the server. The application uses Servlet/JSP to interact with the database for storing and retrieving valid data. The system ensures improved user input accuracy and better data integrity in the library's operations.
